Vicki Fairbanks Taylor
Associate Professor at Shippensburg University

Vicki   It depends on the technology. Can you be more specific? Are you talking about learning management systems, apps, streaming videos, virtual labs, asynchronous learning, simulations, or some other type of technology?

Amy Carr
Teacher at Joplin Public Schools

Amy   Remember the technology is only as smart as the person who is controlling the buttons.

Linda Martin
Technology Director at St. Helena School

Linda   Most teachers just use the technology to do the same things they did without it. I find the most difficult thing about integrating technology is to get teachers to let go of old pedagogies and use technology as a tool to do something different that creates a deeper learning experience.

Monique Allison
Secondary Business Teacher at Rapides Parish School Board

Monique   The hardest thing is time management to actually learn and keep up with the new technologies while completing your normal duties as a teacher. I love technology and over the summer I plan on learning new ones and begin planning with tech lessons this summer. Also, there needs to be more professional development based on implementing technology in the classroom. Having a Technology Coordinator is good to have a each school but its pointless if the teachers are not onboard.

John   Sometimes it seems we should have Common Core for Ed Tech so all of the providers are following the same basic blueprint.

Monique   I believe it's going to go somewhere in that direction pretty soon.

John   There needs to be some standard way to assess a learning management solution. Otherwise, trying to understand the particulars of everything out there becomes a protracted and onerous process.
